LinkedIn: linkedin.com/in/mrjnandu | GitHub: github.com/mrjnandu

PROFESSIONAL SUMMARY

B.Tech Computer Science and Engineering (Artificial Intelligence) student targeting Data Analyst internships and entry-level roles. Skilled in Python, SQL and Power BI, with hands-on projects in data cleaning, exploratory data analysis, feature engineering and machine learning model building.

TECHNICAL SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Validation, Feature Engineering, Statistical Analysis

Machine Learning & NLP: scikit-learn, Logistic Regression, Naive Bayes, NLTK, TF-IDF, Model Evaluation (Accuracy, Precision, ROC-AUC, Confusion Matrix)

Databases: PostgreSQL, SQL Aggregations, CTEs, Window Functions

Visualization & BI: Power BI (Intermediate), DAX, Excel (Intermediate), Matplotlib, Seaborn, KPI Reporting

Tools: Git, GitHub, Jupyter Notebook, VS Code, Streamlit

PROJECTS

Customer Churn Prediction github.com/mrjnandu/customer-churn-prediction
Tech stack: *Python, Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Joblib*

- Built an end-to-end ML pipeline to predict telecom customer churn on 7,032 customers (26.6% churn rate); cleaned the data and performed EDA on contract type and monthly charges.
- Developed a scikit-learn pipeline (imputation, scaling, One-Hot Encoding) with Logistic Regression on a stratified 80/20 split, achieving 80.4% accuracy and 0.836 ROC-AUC.
- Evaluated with a classification report and confusion matrix; saved the model with Joblib to predict individual churn probabilities.

Account Management System github.com/mrjnandu/Account-Management-System
Tech stack: *Python, Streamlit, JSON, OOP*

- Developed a Python bank account management system with console and Streamlit web interfaces, supporting account creation, deposit, withdrawal, update and deletion.
- Designed a reusable OOP Bank class with validations (age 18+, 4-digit PIN, 10,000 deposit limit) and auto-generated account numbers.
- Stored data in a JSON file with PIN-verified operations and documented the workflow with a Mermaid flowchart.

Email/SMS Spam Classifier github.com/mrjnandu/Email-SMS-Spam-Classifier
Tech stack: *Python, scikit-learn, NLTK, Pandas, Seaborn, Streamlit*

- Built an Email/SMS spam classifier on 5,169 unique messages using NLTK preprocessing (tokenization, stopword removal, stemming) and TF-IDF features.
- Compared 3 Naive Bayes models; selected Multinomial NB with 97.1% accuracy and 100% precision.
- Deployed it as a Streamlit web app for real-time spam prediction.

EDUCATION

B.Tech, Computer Science and Engineering (Artificial Intelligence) **2024 – 2028**
Babu Banarasi Das University (BBDU), Lucknow, Uttar Pradesh, India *Currently pursuing*
First-Year CGPA: 8.48/10 | Second-Year CGPA: 8.79/10

CERTIFICATIONS

- **Data Analyst** – Cisco
- **SQL for Data Science** – Simplilearn SkillUp
- **Introduction to Python** – Analytics Vidhya
- **Introduction to AI** – Simplilearn SkillUp
